

Problem	Solutions
<p>1. Read multiple JSON files into a directory to convert into a dataset.</p> <p>I have files text1, text2, text3 in the directory JSON.</p>	<p>Read the JSON File</p> <p>The JSON file is read by R using the function from JSON(). It is stored as a list in R.</p> <pre># Load the package required to read JSON files. library("rjson") # Give the input file name to the function. result <- fromJSON(file = "input.json") # Print the result. print(result)</pre> <p>When we execute the above code, it produces the following result –</p> <pre>\$ID [1] "1" "2" "3" "4" "5" "6" "7" "8" \$Name [1] "Rick" "Dan" "Michelle" "Ryan" "Gary" "Nina" "Simon" "Guru" \$Salary [1] "623.3" "515.2" "611" "729" "843.25" "578" "632.8" "722.5" \$StartDate [1] "1/1/2012" "9/23/2013" "11/15/2014" "5/11/2014" "3/27/2015" "5/21/2013" "7/30/2013" "6/17/2014" \$Dept [1] "IT" "Operations" "IT" "HR" "Finance" "IT" "Operations" "Finance"</pre> <p>Convert JSON to a Data Frame</p> <p>We can convert the extracted data above to a R data frame for further analysis using the as.data.frame() function.</p>

```
# Load the package required to read JSON files.
```

```
library("rjson")
```

```
# Give the input file name to the function.
```

```
result <- fromJSON(file = "input.json")
```

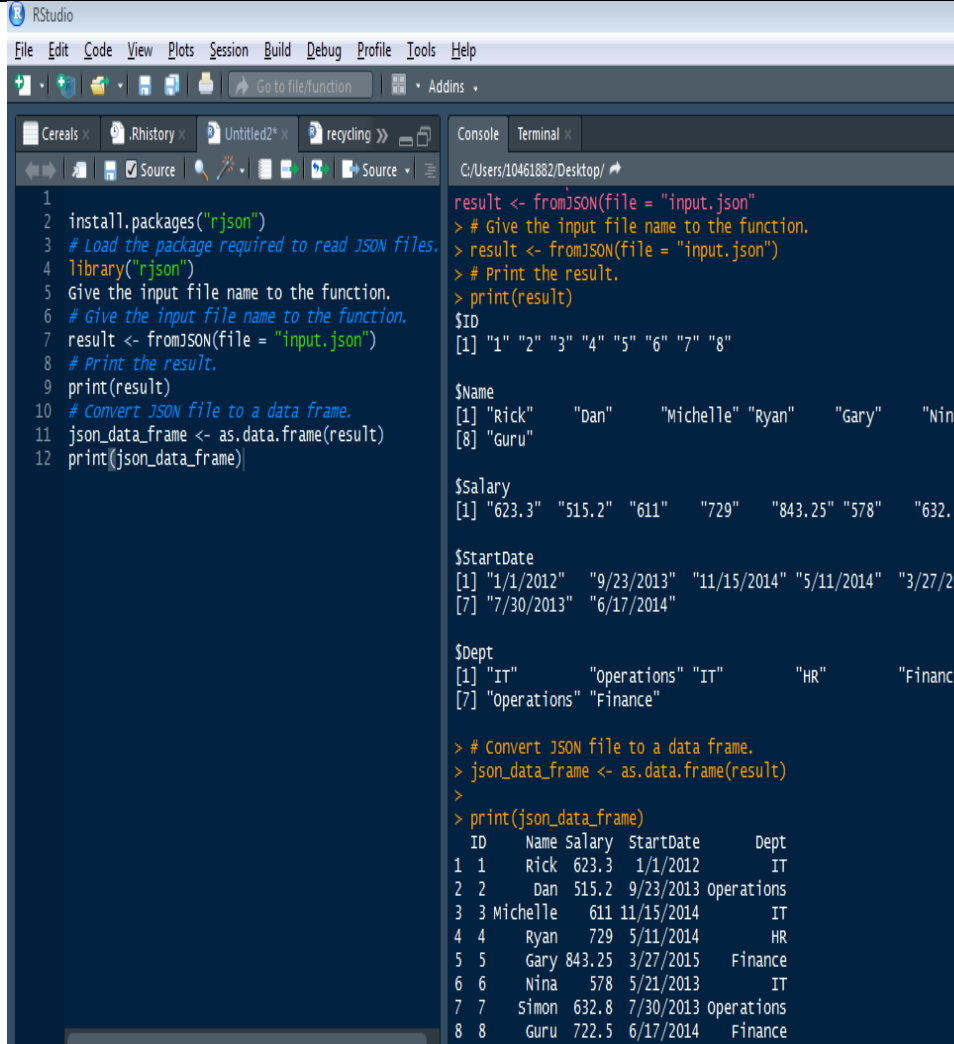

```
# Convert JSON file to a data frame.
```

```
json_data_frame <- as.data.frame(result)
```

```
print(json_data_frame)
```

When we execute the above code, it produces the following result –

	id,	name,	salary,	start_date,	dept
1	1	Rick	623.30	2012-01-01	IT
2	2	Dan	515.20	2013-09-23	Operations
3	3	Michelle	611.00	2014-11-15	IT
4	4	Ryan	729.00	2014-05-11	HR
5	NA	Gary	843.25	2015-03-27	Finance
6	6	Nina	578.00	2013-05-21	IT
7	7	Simon	632.80	2013-07-30	Operations
8	8	Guru	722.50	2014-06-17	Finance

	 <pre> 1 install.packages("rjson") 2 # Load the package required to read JSON files. 3 library("rjson") 4 Give the input file name to the function. 5 # Give the input file name to the function. 6 result <- fromJSON(file = "input.json") 7 # Print the result. 8 print(result) 9 # Convert JSON file to a data frame. 10 json_data_frame <- as.data.frame(result) 11 print(json_data_frame) </pre> <p>Console</p> <pre> result <- fromJSON(file = "input.json") > # Give the input file name to the function. > result <- fromJSON(file = "input.json") > # Print the result. > print(result) \$ID [1] "1" "2" "3" "4" "5" "6" "7" "8" \$Name [1] "Rick" "Dan" "Michelle" "Ryan" "Gary" "Nina" [8] "Guru" \$Salary [1] "623.3" "515.2" "611" "729" "843.25" "578" "632.8" \$StartDate [1] "1/1/2012" "9/23/2013" "11/15/2014" "5/11/2014" "3/27/2015" [7] "7/30/2013" "6/17/2014" \$Dept [1] "IT" "Operations" "IT" "HR" "Finance" [7] "Operations" "Finance" > # Convert JSON file to a data frame. > json_data_frame <- as.data.frame(result) > > print(json_data_frame) ID Name Salary StartDate Dept 1 1 Rick 623.3 1/1/2012 IT 2 2 Dan 515.2 9/23/2013 Operations 3 3 Michelle 611 11/15/2014 IT 4 4 Ryan 729 5/11/2014 HR 5 5 Gary 843.25 3/27/2015 Finance 6 6 Nina 578 5/21/2013 IT 7 7 Simon 632.8 7/30/2013 Operations 8 8 Guru 722.5 6/17/2014 Finance </pre>
<p>2. Parse the following JSON into a data frame.</p> <pre> js<-'{ "name": null, "release_date_local": null, "title": "3 (2011)", "opening_weekend_take": 1234, "year": 2011, "release_date_wide": "2011-09-16", "gross": 59954}' </pre>	<pre> > js<-'{"name": null, "release_date_local": null, "title": "3 (2011)", + "opening_weekend_take": 1234, "year": 2011, + "release_date_wide": "2011-09-16", "gross": 59954}' > > js <- fromJSON(js) > js <- lapply(js, function(x) { + x[sapply(x, is.null)] <- NA + unlist(x) + }) > do.call("rbind", js) name release_date_local title opening_weekend_take year [1,] NA NA "3 (2011)" "1234" "2011" release_date_wide gross [1,] "2011-09-16" "59954" > </pre>

3. Write a script for Variable Binning using R.

```
31 V<-1:4000
32 printV
33 print(V)
34 V<-seq(1:100)
35 print(V)
36 tapply(V,cut(V,60))
37
```

```
> tapply(V,cut(V,60))
Error: unexpected '>' in ">"
> tapply(V,cut(V,60))
